Certificate IV in Information Technology Networking

LEARN ADVANCED INFORMATION TECHNOLOGY NETWORKING SKILLS AND STAY UP TO DATE
About This Course

This specialist IT networking qualification will develop your knowledge and skills to establish and administer a workplace network. You will learn how to maintain networks, install and manage a server and install hardware to a network. You will also benefit from being able to practice your skills on the College virtual server.

Learn skills in problem solving and analysis that will be invaluable even as the technology rapidly changes. Develop business skills to write feasibility reports and evaluate new technology.

Subject Choices

- Safety Consultation in IT
- Maintain Networks
- IT Business Requirements
- Virtual Servers
- Network Security
- Troubleshooting Faults (E)
- Configure a Desktop Environment (E)
Key Course Facts

Start Date: Start immediately

Duration: Complete within 12 months

Delivery Options: On-line/Correspondence

Group Training: Workshops available

Course Fees: $4,400 All materials provided at no extra cost

The course fees may vary if you are a trainee or if the state that you reside in has a subsidised training opportunity. Refer to the tables below.

Entry Requirements

Reading and Writing Skills
The course is an online correspondence course so you need to have average English reading and writing skills, or higher. As a guide - you should have completed Year 12 schooling, or have sound workplace written communication skills.

Limited Enrolments
Please note that the College has a restriction on the total number of Information Technology students to ensure that we can adequately support them. At this time enrolments in this course are restricted to existing students and clients by an application basis.

Spoken English Skills
Some components of this course have practical components where students will be required to demonstrate verbal communication skills as part of their assessments. Average English skills are necessary to complete these components successfully.

Work Placement
To achieve best practical application of this course it is recommended that you be in a work environment where you can practice some of the skills learnt.

Computer and Internet
- Access to a Desktop Computer or Laptop with Windows 7 (or higher)
- You will need access to a computer and the internet with Internet Explorer 8+, Chrome or Firefox
- Access to the following Microsoft Office 2010 (or later) Applications: Word, Excel, PowerPoint
- Access to a Current Windows Operating System (E.g. Windows 7 or higher)
- Access to Networking equipment (Routers, Switches, NICs, Cat5 Cables)

Other
- Ability to study and conduct assessments in a safe environment
- Access to a desktop computer that can be physically dismantled (eg removal of hard drive and other components) and reassembled
- Possess Administrator rights for installation of software on a local computer and to create, edit and delete User Accounts
- Safety Equipment used in the dismantling of Computer Desktops (Electrostatic Wrist strap) is also required
Subject Descriptions

Core Subjects:

Safety Consultation in IT

It is essential that IT professionals work in a safe manner, especially as their roles may involve working with devices that hold electrical current. This subject examines typical WH&S policies and procedures, key safe working practices such as manual handling and storage. It also has three specific safety focused quizzes on consultation, safety laws and computer equipment safety.

Unit(s):

BSBWH304 - Participate effectively in WHS communication and consultation processes

Maintain Networks

Understanding how the network works is essential towards maximum up-time and reliability. This subject take the student through the core components that make up the network as well as understanding the specific protocols and layers needed to maintain the network stability. It will work through a case scenario to provide the student with some real life practical exercises to assist in setting up a client’s networking environment.

Unit(s):

ICTNWK404 - Install, operate and troubleshoot a small enterprise branch network
ICTTEN416 - Install, configure and test an internet protocol network
ICTNWK410 - Install hardware to a network
ICTNWK411 - Deploy software to networked computers

IT Business Requirements

Understanding the need to implement or upgrade technology within an organisation is essential part of any workplace. In this take the student is guided through how to put together a feasibility report towards implementing technology within their current workplace. They will be required to conduct comparisons between solutions as well as detailing ongoing and recurring costs. Within this task the student will also look at the importance of ethics and privacy in an I.T. environment.

Unit(s):

ICTICT401 - Determine and confirm client business requirements
ICTICT418 - Contribute to copyright, ethics and privacy in an ICT environment
ICTICT417 - Identify, evaluate and apply current industry-specific technologies to meet industry standards
ICTSAD401 - Develop and present feasibility reports
Virtual Servers

Today’s computing world is moving more and more towards IT virtualisation. To bring students close to virtualisation, this subject looks at tools such as Cloud-Based Amazon Web Services and Local Virtual Box. Students are guided through the installation and configuration of these virtual servers (in the safety of the College IT environment) using an array of server tools.

Unit(s):
ICTNWK401 - Install and manage a server
ICTNWK402 - Install and configure virtual machines for sustainable ICT

Network Security

Having a secure network will reduce the chances of external and internal intrusions and threats. To further protect a workplace network this subject exposes the learner to elements such as role-based user security, network auditing and monitoring, encrypting email, wireless security as well as network/system analysing for security breaches.

Unit(s):
ICTNWK403 - Manage network and data integrity
ICTNWK406 - Install, configure and test network security
ICTSAS418 - Monitor and administer security of an ICT system

Elective Subjects:

Troubleshooting Faults

Knowing how to appropriately troubleshoot IT problems is an essential skill to have within any workplace. This subject takes you through a range of technical problems and varying technical testing tools. Students will also learn techniques for phone-based support as well as email support requests and ticketing systems, as well as the requirements of onsite support.

Unit(s):
ICTICT421 - Connect, maintain and configure hardware components
ICTSAS420 - Provide first-level remote help desk support
ICTSAS426 - Locate and troubleshoot ICT equipment, system and software faults
ICTTEN410 - Locate, diagnose and rectify faults

Configure a Desktop Environment

Operating systems are the backbone of the computer systems. In this subject you will learn how to configure a desktop involving multiple operating systems on different platforms.

Unit(s):
ICTNWK408 - Configure a desktop environment
Service Guarantees

Quality Training Provider
ACCM was one of the first private training Colleges to be given official RTO registration status. 21 years later we have helped over 2,000 employers and 25,000 students achieve their career goals and have been recognised as a state finalist on the NSW Training Awards. We have a history of satisfied students and clients and repeat business. Our testimonials on our website are genuine and the type of feedback we receive daily. We are so confident that you will be pleased with the College service, that we guarantee it.

Speedy Paper-less Enrolment
Enrolment Applications are accepted 24/7 online. Be fully enrolled in your course in 7 minutes! For customised or employment based courses and traineeships contact us and we will send you a customised enrolment page by email.

Start Anytime - Immediate Enrolment
Within 30 minutes of being enrolled, your personal log-on details are emailed to you. This gives you access to course materials to commence your studies (via our on-line system WebClass).

Industry Expert Student Adviser
You will be allocated your own industry experienced Student Adviser. While they will personally manage your program; you will also benefit from the College team around them to provide expert assistance in all subject areas.

Prompt Results and Feedback
All assessments are promptly returned (via Webclass) with detailed feedback and encouragement. Our goal is to have them back to you in 2 weeks or less. In the meantime you can progress to your next subject.

Personal Contact for the Right Start
When you enrol your College Student Adviser will phone to welcome you to the course. Your Student Adviser will ensure that you understand the best way to progress in your course. They will also assist you with any questions you may have. They will be in regular touch with you at the start of your course to offer motivation, support and guidance. For employment based enrolments they will also make contact with supervisors during this time to address any questions they may have.

Pro-active Learner Support
The support won’t stop! Contact from your College Student Adviser will continue every month, based on the level of help you need. Of course, at any time you can call us to get help. Get immediate assistance over the phone and by email. If immediate assistance is unavailable for any reason, we will make sure a qualified Student Adviser is in contact with you no later than the next business day.

Quality Course Materials
Our step by step course materials have been written by industry experts specifically for the College. They will give you all of the relevant learner information you need to succeed in your course. The resources simplify industry jargon and concepts, give you industry insight and understanding, and focus on current real world business practices.

Employer Progress Updates
For employment based enrolments all supervisors will be emailed a monthly progress report showing the status of all learners. We understand that its essential to keep you up to date.
